

Pharma & Medical Solutions

Optical Image Analysis in Pharma. & Medical Sciences

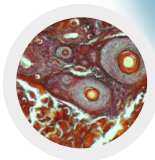

1. Hair cross-section
2. Fibers on a paper filter
3. Skin
4. Suspended particles in a vitamin E capsule
5. Ibuprofen particles
6. Crystals

Clemex Image Analysis Solutions for **Pharma & Medical**

Versatile Image Analysis

Clemex Vision PE

From measuring grain size to counting particles, *Clemex Vision* is an intuitive software program that empowers the user to easily develop custom image analysis macros without writing a single line of code!

Clemex Vision Lite

Clemex Vision Lite captures, measures and even analyses images using pre-built imaging routines (Clemex Application Packages) or simple images.

Clemex Application Packages (compatible with Clemex Vision PE and Vision Lite)

No need to spend hours designing complex image analysis routines, in the Application Packages, the routines have been pre-built and can be modified according to customized needs.

Particle Size and Shape

Clemex PSA300

This is a stand alone counter top instrument for particle size and shape analysis. Information is rapidly generated on thousands of particles as small as 0.5 micron and compiled into statistical data as the analysis takes place.

Clemex Powder Disperser

Clemex Powder Disperser is a dry, free-flowing powder disperser used to “uncluster” particles so that they might be easily observed and differentiated on glass slides for Image Analysis by Optical Microscopy.

Particulate Analysis

Clemex Particulate Filter

This system can handle standard size circular paper filters. Large fibers, overlapping fibers, and small, tiny dirt particles are all identified in the same run.

High Speed Robotic Analysis

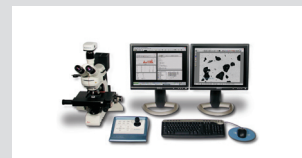

Clemex MaestroScope

Clemex MaestroScope is the perfect complement to obtain a fully automated image analysis system for high volume production. It is a one of a kind scientific instrument that caters to the unique need of research and quality control laboratories.

Capture, Measure, Annotate

Clemex Captiva

Capture images from multiple devices and share information with your colleagues or customers by easily adding non-destructive annotations and applying a host of direct measures.
