

Our vision

It goes without saying that laboratories should not encounter any difficulties when trying to use a laboratory management system efficiently. Such potential difficulties could easily lead to the occurrence of small and serious errors, which are harmful for all parties concerned. Usually the occurrence of such errors causes for an increased time pressure and leads to unnecessary tensions and stress. In short, such situations are detrimental to any laboratory and we therefore believe that the system itself should relieve you of any unnecessary work without any cause for worries.

Good results that arise from your work will require less labour, due to the implementation of well thought-out solutions which benefit you. This way, you will be able to spend your valuable time on other tasks. Because of this, you will learn to trust the LMS as well as experience its true potential.

Our system is professional, reliable, fast and effective. A good support department that you can always contact with any questions is something that we highly value. Our employees are constantly keeping our systems up-to-date as well as accurate using their knowledge and experience.

We would be delighted to demonstrate our system to you on-site without any obligations. This demonstration will give you a clearer and more practical view of how and why the system can improve your procedures. Our system provides an effective and complete package which ensures that you will find more satisfaction in your work.

“ Finalist has been a reliable partner for UMCN Pathology for quite some time and is always open to new ideas and developments when it comes to a reliable lab management system, as well as being very customer-focused and forward looking.

We also find this to be particularly true. Now that we are spending a great deal of energy on digital ordering in UMCN's EPIC environment. ”

“ Implementation of the LMS and collaboration with Finalist have been of great value for Pathan in the continuing development of different modules of the LMS in recent years. We look forward to a continuation of this effective collaboration and the good contacts we have with Finalist and we hope in time to expand our good operating system further. ”

Would you like to minimize the effects of errors, unnecessary labour, and stress?

Contact our team at Finalist Software and they will make sure to familiarize you with the LMS both personally and effectively on-site.

Through the use of Finalist Software's LMS, laboratories are easily able to construct their enterprises efficiently and uncomplicatedly. Errors, unnecessary work, and stress will no longer be an issue as the LMS broadens your work experience and allows you to live up to your expertise. The system is meant to aid you, rather than the other way around.

Ten reasons to choose for Finalist Software's LMS:

- Finalist has existed for over 15 years
- LMS has **been operational for over 12 years** within several different pathology laboratories
- **Market leader in the Netherlands**
- Independent of shareholders' interests
- **By technicians, for technicians**
- Developed in close collaboration with laboratories
- **Highly flexible, for both great and small laboratories**
- Affordable hourly rate
- **Support by telephone**
- User group meetings
- All of our consultants have **years of experience** working in a pathology laboratory.

Pathology Laboratory Information Management System

Made for and by laboratories

Finalist Noord Nederland C.V.

For and by laboratories

The LMS is a process-supporting and quality-extending system for pathology laboratories. This system contains and controls the logistic process of laboratories. Unique material is identified through, for example, barcodes to limit the manual input and thereby prevent the occurrence of errors. Furthermore, the LMS creates a greater insight into the progress of examinations.

The LMS aids you in diminishing the degree of errors, helps you in preventing extra and unnecessary work, as well as makes sure that you are able to do what you do best. You are guaranteed of a system that is aimed at serving you, rather than the other way around. The LMS relieves you of excess work, which ensures that you can carry out the more interesting tasks that your job involves. The LMS has been a highly valued resource in many laboratories for years. We would like to emphasize that it is not without cause that Finalist Software is the market leader in the Netherlands.

REDUCE ERRORS

The occurrence of errors can have major consequences in pathology. Confusing and mixing up of different patients is a horror to us all; our LMS helps in preventing errors that can lead to such confusions. This way, you are able to fully concentrate on your job, knowing that LMS is there to support you.

Our work method

Our LMS aids you in preventing errors. With our system, you are no longer forced to use several different systems for viewing and altering patient and examination data. In addition, you can easily record integrated macroscopy and microscopy through the use of a camera. You can also request additional stainings/tests through the LMS. The use of barcodes, which uniquely identifies all objects, results in a reduction of manual input that significantly reduces the likelihood of making errors.

REDUCE WORK

Increased amounts of work raises both the likelihood of errors as well as costs. In addition, extra work generally creates a higher amount of work pressure. This extra work also takes up valuable time which you cannot put towards the quality of your work. Your job will become more enjoyable and you will have more time for important issues, since you will have to complete fewer tasks when using LMS. You will also gain a greater insight in overall activities, which yet again reduces the occurrence of errors.

Our work method

We reduce your work pressure because you will no longer need different systems to complete tasks that require you to manually fill in data. We provide an integrated system that adapts to your and your laboratories' particular requirements. We also provide effective solutions, such as barcodes, that take up much necessary data for you. Simply put: less work as well as a reduced chance of errors.

REDUCE STRESS

Responsibility is a major factor in pathology. Insufficient and faulty systems that do not properly assist you in your tasks can lead to tensions, because they create a feeling of distrust towards the system. You want a system that ensures successful and proper completion of the tasks you present it with. In short, a system that is worth your trust.

Our work method

Our LMS adapts to your laboratory to make sure that you can fully concentrate on your personal work flow. We also say: "less work, more flow." The LMS is a highly efficient extension of your activities and that is why it offers you unique possibilities of improving the organization of your work, as well as opportunities to broaden it.

“ We deliberately chose Finalist at the time because Finalist's LMS is a good and sound product, its operation is intuitive, even for a trainee who did not have a thorough command of the Dutch language. The LMS has turned out to be stable in practice and requires relatively little maintenance. We have found Finalist to be a company that provides good service and responds quickly to our questions and needs. The fact that Finalist has a good number of system implementations in the Netherlands also gives us confidence for the future. ”

We use the following tools to live up to our promises

We provide you with a system that simplifies as well as clarifies your tasks.

The LMS establishes reliability, swiftness, and efficiency by using the following tools.

LMS Imaging

- Fully integrated into the LMS with supports for document scanning, macro photos and micro photos.
- Integration made possible for systems that process digital slides.
- Archiving images under examination or at object level (specimen, cassette, slide etc.).

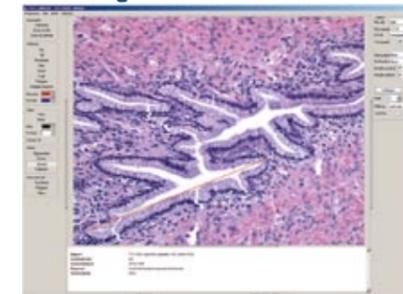

This process always clarifies the original image from which an examination or object is extracted.

- Controlling Canon EOS, Nikon, Leica, Basler among many others, as well as scanners with a WIA or TWAIN driver.

Scanning documents

- Scanning of all forms and documents immediately upon receiving the material or when suitable during the work process.
- Request forms are automatically filed under the right examination number through the barcode-recognition software. The documents are visible immediately upon cropping.

Measuring and annotations

- Images can be measured and annotated. Both surface and length can be measured.
- All additional options can be hidden at the push of a button in order to improve assessment of the image.
- Size, form, and colour of annotations are fully adjustable.

LMSweb

The pathologist mainly operates within LMSweb. The fields in LMSweb can be adjusted, additional enquiries can be made, the making of images is available, and you can also give instructions to send material elsewhere for a consultation. The Thesaurus is available for consultation within the LMSweb. Fonts can be altered according to your personal preference.

On-demand printing

Confusions and mix ups are nearly fully eradicated and searching for the right labels is over! The cassettes can be scanned by the microtome with a 2D-barcode on the cassette itself, after which label printers or glass printers print out the requests. The module is also available for (room-saving) touchscreen PCs.

Declaration and invoicing

In addition to being able to create and forward billing data, full DFT links from LMS are also active. No more manual entries, no more overlooked declarations!

Order communication

- LMS is ready! There are several different ways of implementing order communication.
- Receiving the material already LMS-labelled.
- All specimens are scanned before the order number is allowed into use. This ensures that all material is present.
- The first laboratory that used LMS has been running order communication for quite some time and over 90% of all requests are dealt with via order communication.
- The LMS ensures in these ways that it achieves a maximum amount of user-friendliness as well as a maximum level of quality.

Linking Ventana, Bond, Dako, Digene, and Cobas 4800

The LMS can be linked very effectively with other devices. These devices can then be easily controlled by LMS. For example, the connection with Digene warrants that results are no longer required to be entered manually. Other

systems require sections to be stained again under certain circumstances and because of certain values in the results. The connection that our LMS has with Digene makes sure that this is done automatically. This yet again reduces your workload as well as the likelihood of errors.

Stainingscore

Stainings can be technically assessed using the staining score module. The staining can automatically be re-requested when the staining is limited or when it cannot be assessed.

Signaling unusual results

Results can arise that require actions to be taken as soon as possible. This function gives the pathologist the option to signal an unusual result, which automatically triggers LMS - after a request for authorization - to send an electronic message to inform the requestor. This enables the requestor to take immediate actions.

Material Exchange Registration

- The Material Exchange Registration module is a module to register incoming and outgoing materials between different laboratories.
- The Material Exchange Registration module in LMS enables you to easily send and receive your consultations and revisions.
- Appendices in the form of accompanying letters are generated automatically and are easy to manage.
- Finalist's LMS also allows you to print a 2D-barcode onto an accompanying letter to another LMS-laboratory, which can be scanned in the receiving LMS-laboratory and this automatically fills in all the relevant data.

There's more...

Our LMS is far more comprehensive than we are able to show on these few pages. Ask for a demonstration or a free call for further information.
