

A powerful and highly flexible platform for the management of digital images and associated data

Providing a central hub for researchers to create, manage, interrogate and share individual and collaborative studies, PathXL Xplore is the most powerful system on the market to support digital pathology.

Easy to Use

A new generation approach to research image data management. Much easier to use, manage and exploit. A new interface designed by pathologists and researchers.

Share and Collaborate

A scanner agnostic image management platform that allows for rapid sharing with colleagues and wider collaboration across geographies and institutions.

Work More Efficiently

Integrate and easily manage image data from multiple sources. Allows for more powerful interrogation of data within a single platform and eliminates cross-checking.

Fits your existing IT infrastructure

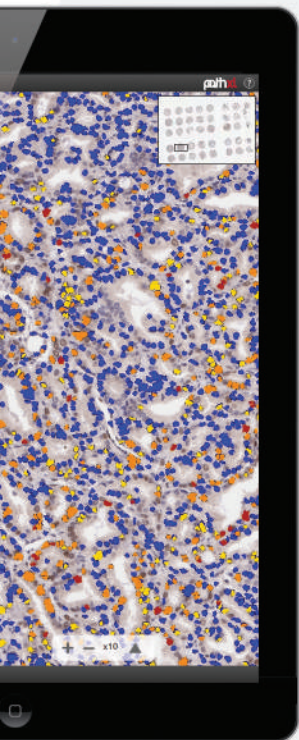

Simple installation and set-up, enhanced scalability and security.

Reflects the modern working environment

Browser based. Securely accessible anywhere from any device.

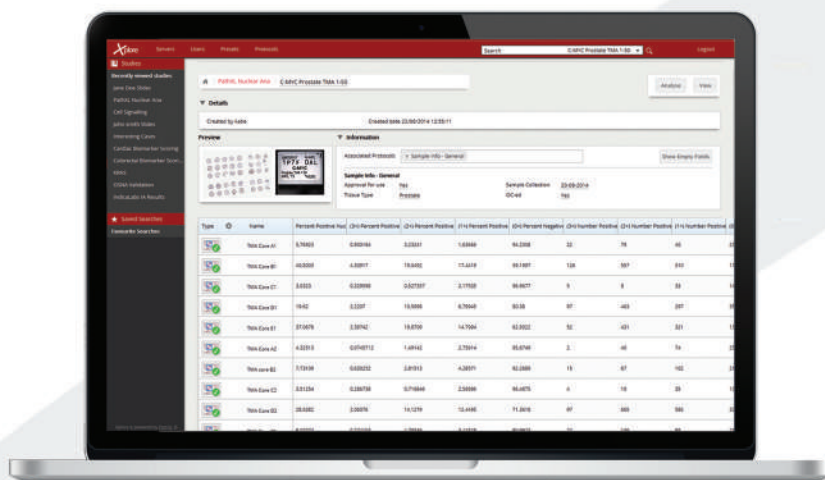

Improved ROI

Brings structured workflow to your scanner investment and maximizes the return from your historic and future digital pathology purchases.

Key Features

- Compatible with all major digital slide formats and microscope images
- Entirely web-based for easy access from any location on any device
- Auto import of slides and data captured through your scanner
- User configurable hierarchy of studies/projects/cases/slides/data
- Quickly and easily create data fields and associate with slides, studies and projects
- Powerful advanced search capability
- Share studies with a single click. Study partners receive automatic email notification
- Easily involve one time study partners through user friendly interface
- Existing APIs for rapid integration with third party platforms
